

Consensus document launch

Blistering matters

From evidence to action in preventing skin harm

Friday
September 25th

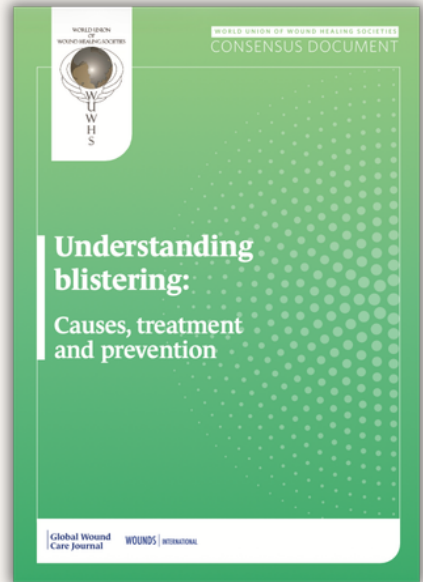

16:45 - 18:00

MR301

Session details:

Skin blistering is often dismissed as a minor complication, yet it can be an early indicator of preventable skin damage with significant consequences for patients and healthcare systems. This symposium will launch the latest clinical consensus on blister prevention, exploring the causes, impact, and evidence-based strategies to reduce blistering across healthcare settings. Through expert presentations, real-world case studies, and interactive discussion, delegates will gain practical insights into recognising risk, implementing best practice, and translating guidance into improved patient outcomes. Join leading experts as they challenge current perceptions and demonstrate why preventing blistering should be a priority for every clinician.

Speakers:

Prof. Karen Ousey

PhD, MA, PGDE, RN,

Prof. Paul Chadwick

PhD, MSc, BSc, FFPM
RCPS (glasg), FRCPod
(med)

Dr. Daniel Chaverri

MD, PhD, RN,
DipNurs, BAnth

Chair:

Prof. Dato' Dr.
Harikrishna K.R. Nair,
S.I.S., K.M.N., M.D., FRCPI,
FCWCS, FMSWCP, ICW,
PG (Wound Healing &
Tissue Repair)

Our goal: keeping your skin safe

Safetac® Technology is Mölnlycke's proprietary soft silicone adhesive technology, refined over more than 35 years to minimise wound and skin trauma and reduce pain during dressing removal.

More than 750 peer-reviewed articles, including over 60 randomised controlled trials, 40 published conference abstracts and more than 200 posters, support the use of dressings featuring Safetac® Technology.
