

Stays on Uniquely conforms

Mepilex® Border Flex
Mepilex® Border Flex Lite

Mölnlycke®

Wounds need to heal. Patients need care. Nurses need time. Budgets are tight. The challenge is finding a dressing that is comfortable and stays on as long as it is needed.

Introducing the Mepilex® Border Flex range

Our next generation of flexible dressings are designed to stay on and uniquely conform aiming to give time back to nurses, cost savings back to managers and quality of life back to patients.

*Not available in Mepilex Border Flex Lite

Choose the right dressing for your patient's needs

Designed for a wide range of exuding wounds including: leg and foot ulcers, traumatic wounds (e.g. skin tears) and surgical wounds, as well as part of a prophylactic therapy to help prevent skin damage, e.g. pressure injuries.

Mepilex® Border Flex Lite

Mepilex® Border Flex Lite is a four-layer dressing with Flex Technology for non- to moderately exuding wounds, and is also available in smaller sizes.

Up to 1/3 of patients complain that their dressing needs changing daily⁷.

Smart exudate management

Giving you confidence to leave the dressing on for longer and still maintain an optimal wound healing environment.

1. Rapid absorption with minimal swelling:

The foam layer allows rapid absorption of both normal and viscous exudate^{8,9}.

2. Maximises capacity by channelling exudate:

Exudate is channelled away from the wound and over a wider area to increase moisture vapour loss and reduce swelling^{3,5}.

3. Traps bacteria away from the wound*:

The superabsorbent fibres in the retention layer prevent exudate containing bacteria from re-entering the wound bed, even under compression¹⁰. The backing film prevents entry of external bacteria^{11**}.

4. Tracks exudate without dressing removal:

The Exudate Progress Monitor allows the spread of exudate to be objectively assessed and recorded, without disturbing the wound¹.

*Not available in Mepilex Border Flex Lite.

**Particles/microbes larger than 25 micrometres

How the Exudate Progress Monitor works

The Exudate Progress Monitor gives you the confidence to leave the dressing in place for longer³.

The Exudate Progress Monitor is a grid of equidistant dots.

e.g. 4x4cm

As exudate spreads you can record a dot count that reflects exudate volume in the dressing.

e.g. 8x10cm

You can then refer to the recorded dot count to help monitor exudate trends.

e.g. 10x14cm

Consider dressing change when exudate is approaching the borders of the dressing*.

* Wound inspection and dressing change frequencies are driven by clinical decision and should be at the discretion of the treating clinician.

9/10 patients feel their wound impacts their quality of life⁷.

Reduced pain and damage to the skin

All Mepilex® Border Flex dressings seek to reduce trauma caused by dressing changes. This is made possible by our proven Safetac® Technology soft silicone wound contact layer, which minimises pain and damage to the skin and risk of maceration compared with traditional (adhesive) dressings^{5,12,13}.

More than

9/10

patients preferred dressings with Safetac® over other dressings with traditional adhesives⁵.

Safetac[®]
TECHNOLOGY

Skin stripping occurs with traditional adhesive

Safetac® minimises skin stripping

More than half (58%) of patients complain that their dressing pulls or doesn't move with their body⁷.

Designed to conform and stay on

Thanks to Flex Technology, the unique conformability of Mepilex® Border Flex allows it to adapt to the shape and movement of the patient¹³. Reducing pressure on the skin and pull on the borders increases comfort and minimises the risk of detachment⁶. And it's water-resistant so your patients can shower⁸.

Unique Flex Technology = 360° flexibility

Y-cuts expand to allow movement:

Mepilex® Border Flex is as much as up to

11x more flexible than other bordered foam dressings tested¹⁴.

Mepilex® Border Flex Dressing Family – for all stages of healing

Dressings for many wound types and locations

Non- to moderately exuding wounds

Wide range of exuding wounds

Leg ulcers

Pressure injuries

Skin tears

Trauma wounds

Intact skin

Mepilex® Border Flex and Oval dressings may also be used as part of a prophylactic therapy to help prevent skin damage, e.g. pressure injuries.

Mepilex® Border Flex can make a positive impact on your budget

Performed under real-world conditions, two individual Quality Improvement Projects (QIPs) conducted in the hospital setting in the US showed substantial reductions in dressing utilisation compared to their previous formulary dressings* whilst maintaining the healing trajectory of the wounds evaluated. A change in protocol due to the extended wear time of Mepilex® Border Flex thus resulted in fewer dressing changes, documented cost reductions and less nursing time^{15,16}.

Mepilex Border Flex

Product code	Size (cm)	Pad size (cm)	Pcs/Box
595211	7.5 x 7.5	4.5 x 4.5	10
595311	10 x 10	6.5 x 6.5	10
